CDC [thresholds are available via this link](#).

*Number of new cases per 100,000 persons within the last 14 days is calculated by adding the number of new cases in the county (or other community type) in the last 14 days divided by the population in the county and multiplying by 100,000.

**Percentage of RT-PCR tests in the community (e.g., county) that are positive during the last 14 days is calculated by dividing the number of positive tests over the last 14 days by the total number of tests resulted over the last 14 days. Diagnostic tests are viral (RT-PCR) diagnostic and screening laboratory tests (excludes antibody testing and RT-PCR testing for surveillance purposes).

***[Hospital beds and ICU](#) beds occupied per Open Data PA source for Allegheny County. PRSD Healthcare Leadership Council experts indicate that bed availability and type of beds shift as hospitals reassign or redesign facility spaces. These indicators are proxies for underlying community burden and capacity of the local healthcare system.. Calculations for percentage of hospital beds occupied by COVID-19 patients is determined by (# of COVID-19 Patients) / (Total ICU Beds + Total Medical/Surgical Beds)

**** Sudden increase in the number of COVID-19 cases in a localized community or geographic area as determined by the local and state health department.

PRSD Eligible Case Count Per 14-Day Rolling Window (Revised 3.5.21)

School	Rolling 14 Window Starts with 1st Case Symptom Onset	Rolling 14 End Identified After 1st Case	Cases in Window (Total Number Within Date Range)	Potential Action Threshold*
PRHS	2/22/21	3/7/21	1	6 - 10
PRMS	2/23/21	3/8/21	1	4 - 6
EHUE	2/25/21	3/10/21	1	6 - 10
